

New construction rebates

Minnesota Energy Resources offers rebates for the installation of energy-efficient natural gas measures in newly constructed homes. To be eligible, the new home must be served by Minnesota Energy Resources. Homes that have participated in the Home Energy Excellence programs are not eligible for certain rebates under this program. Please reference the table.

Owners or builders may apply— however, only one rebate will be issued for each qualifying piece of equipment. An itemized invoice for the equipment must be included with the application.

Builders— please inform the home buyer that rebates for a home have already been applied for, if that is the case.

To apply for a rebate, download and fill out the **new construction rebate application**.

Funding is limited and can change or end at any time. Applications will be processed on a first-come, first-served basis. The program application must be received within 60 days of installation.

For additional questions or to download an application, please visit minnesotaenergyresources.com or call us at **866-872-0052, option 1**.

Rebates and minimum efficiency requirements

Measure	Minimum efficiency	Home Energy Excellence rebate eligibility list	Rebate
Natural gas furnace	95% AFUE	No	\$200
Natural gas furnace	97% AFUE	No	\$300
Natural gas furnace for mobile homes	92% AFUE	No	\$200
Natural gas boiler	90% AFUE	No	\$200
