

4U2 Program

Are your energy bills difficult to manage? Do you fall just short of qualifying for the Energy Assistance Program or Weatherization Assistance Program? Let us help.

Improving your home's efficiency helps save money, but overcoming the up-front cost associated with installing energy-efficient upgrades can be difficult especially if you have a limited or fixed income.

How it works

- Once your application has been approved, a 4U2 energy advisor will schedule an appointment.
- A free assessment of your home is conducted to identify cost-effective energy improvements and weatherization opportunities to make your home more efficient. Eligible upgrades may include whole home insulation, heating and water heating system upgrades, as well as the installation of programmable thermostats and safety items.
- For homeowners, the program covers the installation costs of cost-effective energy efficiency improvements identified by the audit.
- For rental properties, the program covers 50% of cost-effective energy efficiency improvements.
- If cost-effective energy-efficiency measures are identified and installed in your home, a potential one-time co-pay of \$150 may be added to your Minnesota Energy Resources bill.
- The energy advisor will coordinate the installation of energy-efficiency improvements.

Qualifications (you must meet all qualifications to be eligible)

- You must be the owner or renter of the property and you must live at the property.
- If you are a renter, the owner must authorize your participation and agree to potential cost-sharing.
- You must be responsible for direct payment of your natural gas bill.
- Your total gross household income must meet one of the following income qualifiers:
 - 80% of Area Median Income (AMI)
 - 60% of State Median Income (SMI)
 - Already receiving Energy Assistance Payments

Cost-effective energy improvements and weatherization opportunities

- Furnace and/or water heater replacement
- Whole home insulation
- Heating system tune-up
- Programmable thermostat replacement
- Installation of health and safety measures like bath fans, dryer vents and CO2 detectors.
