

# Commercial rebates and programs

## Furnace heating system and components

Installing energy-efficient technology is a smart way to **lower your energy bills**. This program offers standardized **rebates for new high-efficiency** forced-air heating systems, low-intensity infrared heating systems and programmable setback thermostats.

## Furnace and boiler tune-ups and steam traps

Just like vehicles, regularly maintained heating systems run more efficiently and last longer. **Furnace and boiler tune-ups** help ensure maximum efficiency and help avoid expensive repairs. Plus, you **get a rebate!**

Maintaining **steam trap** operation is a common-sense approach to improve steam system performance and potentially reduce unnecessary costs. Replacements or significant repairs of failed steam traps are eligible for rebates.

## Water heating

Rebates for new, qualifying high-efficiency **water heating systems** and drain water heat recovery devices are available for installed new construction or replacement projects.

## Insulation

By improving the insulation of your building, **you can save** on heating and cooling costs all year round while enhancing occupant comfort.

Our rebates help businesses with natural gas heating increase **insulation** levels in existing buildings.

## Food service equipment

Your business can get rebates for new high-efficiency **food service equipment**: various ovens, fryers, pasta cookers, broilers, dishwashers and pre-rinse spray valves, among others.

## Grocery and commercial laundry

Investing in energy-efficient technology is an easy way to manage your energy costs. Rebates are available for adding doors to coolers and freezers and for upgrading to a natural gas **commercial clothes dryer** with an energy-efficient burner.

## Grain dryer

Replace your **existing grain dryer** with a new high-efficiency grain dryer to reduce natural gas use in your harvesting processes and to avoid excessive repairs.

## Custom rebates

A **custom rebate** is tailored to projects that do not qualify for prescriptive rebates. By taking advantage, you may be able to reduce monthly energy costs and shorten the payback period of your new equipment.

## C/I turn-key efficiency

To help our large customers overcome unique challenges, we've designed the **commercial/industrial turn-key efficiency program**, which helps them reduce monthly energy costs and shorten the payback period of new high-efficiency equipment and processes.

**See more programs on back!**

Take advantage of energy efficiency rebates and programs for your business.

### Energy-saving audits

How does your business use energy?  
How does your energy use compare to that of similar businesses? A professional **energy audit** can identify ways to save energy and reduce operating costs.

### Design assistance and modeling

The **design assistance and modeling program** helps developers and businesses build energy efficiency into the new construction or major renovation of commercial buildings.

### ENERGY STAR® certification for commercial buildings

ENERGY STAR-certified buildings save energy, save money and help **protect the environment** by generating fewer greenhouse gas emissions than typical buildings. We offer an incentive to help offset the verification costs to obtain **ENERGY STAR certification**.

### Multifamily energy savings

Whether your building is individually metered or centrally metered, the **multifamily energy savings program** serves most multifamily building types including low-income housing, 55-and-over housing, assisted living, on-campus college housing, condominiums and apartments.
