

Custom Rebate Program

While prescriptive rebates have set rebate amounts and efficiency requirements for specific gas equipment, a custom rebate is tailored to projects that do not qualify for prescriptive rebates. By taking advantage of the Custom Rebate Program, you may be able to reduce monthly energy costs and shorten the payback period of your new equipment. Examples of qualifying equipment include:

- High efficiency process equipment
- Efficient heating and water heating systems not covered by a prescriptive rebate
- Heat recovery systems
- Energy management systems (EMS) and controls

All projects will be individually reviewed. Rebates are based on a portion of the cost difference between standard product and high efficiency products and practices and are calculated as the lesser of:

- A buy down to a 1 year payback, or
- \$1.00 per therm saved during the first year, or
- Full incremental cost

Pre-approvals may be required to participate in the Custom Rebate Program. Funding is limited and can change or end at any time. Applications will be processed on a first-come, first-served basis.

To apply for the program, download and fill out the **custom rebate application** at minnesotaenergyresources.com/businessrebates.

You will need to provide project specific information, such as equipment type, size, efficiency and cost. The program administrator may contact you for further information.

For additional questions on this program or to download an application, visit minnesotaenergyresources.com or call us at **866-872-0052, option 2**.
