

CASE STUDY

A school district's breath of fresh air

a smart investment for the future

Recently, the Lewiston School District received a **\$21,605 rebate** check from Minnesota Energy Resources for completing a full indoor air quality renovation project. The upgrades include the replacement and installation of high efficiency boilers, HVAC systems, and a climate control system.

The Turn-Key Efficiency rebate program reduced out-of-pocket costs, allowing for the purchase of energy efficient products. Although these upgrades are some of the largest the district anticipates making in the next decade, plans include further smaller-scale **energy saving opportunities**.

The Turn-Key Efficiency rebate program lets you work **one-on-one with an energy advisor** to complete an energy assessment and create a long-term plan for energy efficiency. You'll be able to receive energy rebates, shorten the payback period of new high-efficiency equipment, and **track savings** using the ENERGY STAR® Portfolio Manager.

Visit **minnesotaenergyresources.com** to learn how your energy improvements can qualify for cash rebates, or contact 24-Hour Customer Service at **866-872-0052**.

"The scope of this project is probably the largest one we will take on in the next ten years. But, looking down the road, it will save us money and save taxpayers money."

*—Jeff Apse, Superintendent,
Lewiston School District*
