

New systems part of energy efficient upgrades

cooking up a healthy change

Mayo Clinic in Rochester recently received a **\$11,213 rebate** check for the purchase and installation of a new control system and venting unit for the kitchen of the Mayo Hardwick Building.

With help from the Minnesota Energy Resources Turn-Key Efficiency rebate program, Mayo Clinic is in the process of making **further energy efficient upgrades** in other areas of the campus, including a heat recovering system in one of the laboratories as well as additional vent hoods and system controls in kitchens.

The Turn-Key Efficiency rebate program lets you work **one-on-one with an energy advisor** to complete an energy assessment and create a long-term plan for energy efficiency. You'll be able to receive energy rebates, shorten the payback period of new high-efficiency equipment, and **track savings** using the ENERGY STAR® Portfolio Manager.

Visit **minnesotaenergyresources.com** to learn how your energy improvements can qualify for cash rebates, or contact 24-Hour Customer Service at **866-872-0052**.

“These rebates are a good opportunity for us to save money and energy using high quality equipment that lasts longer. It’s nice to have someone who is really easy to work with and gets you going in the right direction.”
