

Grocery and commercial laundry rebates

Adding new doors to existing open multideck freezer or cooler cases can save on energy costs while making your retail space even more comfortable.

Commercial laundries can save on drying costs by retrofitting existing gas clothes dryers with modulating burner controls.

To apply for a rebate, download and fill out the **commercial specialty equipment application**. Funding is limited and can change or end at any time. Applications will be processed on a first-come, first-served basis.

For additional questions on this program or to download an application, visit minnesotaenergyresources.com, call us at 866-872-0052, option 2, or email us at merc@appliedenergygroup.com.

Rebates and minimum efficiency requirements

Equipment	Minimum efficiency	Rebate
Commercial grocery		
Add doors to multideck case, cooler	Where no door exists	\$42 per door
Add doors to multideck case, freezer	Where no door exists	\$42 per door
Commercial laundry		
Natural gas clothes dryer modulating burner retrofit	Must replace existing equipment	\$175 per unit

Space heating in building must be fueled by natural gas to qualify for commercial grocery rebates. Existing cases must be open (no doors), multideck style. Doors must be new. Island, floral and specialty cases do not qualify.

For commercial laundry, modulating burner retrofit must use at least a two-stage modulating gas valve control kit.
